

Common Problems Business Analyst Faces

Paralysis by analysis

- Business Analyst needs to understand the requirements and needs from scratch.
- This can be achieved by some kind of deep reading of the requirements, business objectives, scope, and data.
- A BA needs to be aware of all the new and useful technologies which are being used and are good for realistic implementation.
- Reading and absorbing tons of information can be a mind-boggling task and something that can't be skipped.

Knowledge and Skills

- Business Analysts actually need to have the 'know a bit of all' attitude.
- BA needs to timely upgrade tools and technology which the team is using.

Dealing with Conflicts

- BA should be cool and patient who can take the authority to solve all internal conflicts.
- Needs to respect the opinion of each team member, but implement only that is good.

Changing Requirements

- When requirements are changed frequently, all development processes are disturbed.
- Everything needs to be reviewed and planned again, which at last delay the deadline.

High Expectations of Clients

- Clients can ask for any feature which may be less cost-efficient for the company.

Unsupportive Clients

- Clients are not clear about requirements.
- Changing priorities.

Resistance in sharing information

- If the client is very resistance in providing detailed information of the product needs to be developed, nothing can be developed with clarity.

- The client may be resistance because of any political issue, business deal or lack of knowledge
